

NCURB is the 'National Conference for Undergraduate Research in Biology'. It is a research conference involving undergraduates specific to biology which we are planning on organising in **IISER Tirupati**.

As we all know, gaining research experience during our undergraduate studies is now a norm. But when it comes to conferences and seminars, most of the speakers are post graduates or post doctorates. **We want to create a platform in which undergraduates talk about the labs they are working in, the research they may have published, the work they do during the summer, or open-ended questions and hypotheses.**

We are thinking of planning a 2 day conference in IISER Tirupati on the 16th and 17th of December to share our biology related research experience with one another formally. It could involve student talks, poster presentations, lab visits, breakout sessions, and some fun activities like bird watching and stargazing.

All undergraduates: BSc. (first to third year), MSc. (until last year), BS-MS or BSc.-MSc. Integrated courses, as well as any other equivalent degree (BTech., MTech., etc.) are welcome to participate.

We would like to take a quick survey to analyse what you might think of this idea. Please take a few minutes out of your time to let us know what you think.
